

Universal Alloy Corporation

Press Release

Universal Alloy Corporation Europe officially began operations in November 2009 at their new 150,000 square foot hard alloy aluminum extrusion facility in Dumbravita, Romania.

This four press aircraft extrusion operation will initially supply the Airbus fuselage structures supply chain.

UACE plans two additional investments in 2010 for the site at Dumbravita; one for an integral cast billet facility and the other for aircraft machined parts manufacturing.
